BOEING COMPOSITES MALAYSIA

IT Network Engineer

We are looking for an IT Network Engineer to design, manage, maintain and support the organization's network infrastructure. This role requires full on-site presence to handle physical network equipment, troubleshooting and day-to-day operation

Responsibilities:

- Install, configure, and maintain network equipment (VLANs, routers, switches, firewalls, access points)
- Perform onsite troubleshooting for network issues (VLANs, LAN, WAN, Wi-Fi, VPN)
- Manage network cabling, patch panels, and server room equipment
- Implement network changes, upgrades, and maintenance activities
- Support users and resolve network-related incidents
- Lead network projects
- Monitor network performance, availability, and security
- Maintain network documentation, diagrams, and SOPs
- Coordinate with vendors and service providers for onsite support if needed
- Ensure IT Network Infrastructure compliance with security policies and IT standards

Requirements:

- Bachelor Degree in in IT, Computer Science or equivalent
- 2-5 years of working experience in network support or engineering
- Strong knowledge in
  - TCP/IP, LAN/WAN, VLAN
  - Routing & switching, knowledge of HPE Aruba Networking is an added advantage
  - Firewalls and basic network security
- Hands-on experience with physical network infrastructure
- Ability to work onsite full-time and respond to urgent network issues
- Good troubleshooting and communication skills
- A proactive attitude toward learning and adapting to new technologies
