

## BOEING COMPOSITES MALAYSIA

# Industrial Engineer

Join our team as an Industrial Engineer and shape the future of aerospace composites through lean innovation.

### Responsibilities:

- Conduct time studies to define standard manufacturing hours and optimize workflows
- Design Value Stream Maps (VSM) and simulation models for process improvements
- Lead continuous improvement (CI) projects to eliminate waste and reduce costs
- Analyze production data to build dashboards and track performance metrics
- Develop learning curve models to support efficient production ramp-up.
- Collaborate cross-functionally to ensure resource readiness (manpower, equipment, space)
- Deliver actionable insights to enhance operational scalability and decision-making

### Requirements:

- Bachelor's degree in Industrial Engineering, or any related field
- 2 – 3 years of relevant experience in similar role
- Strong analytical, problem-solving and collaboration skills
- Proactive, detail-oriented, and willing to learn
